

## **ABSTRACT OF THE DISCLOSURE**

A method for pointing at information in a multi-dimensional space is provided. The method includes the steps of (a) setting a portion of a full screen including a plurality of pieces of information, as a pointing screen; (b) determining whether desired information to be pointed at is included in the set pointing screen; (c) when it is determined that the desired information is not included in the pointing screen, moving the pointing screen so that the desired information can be included in the pointing screen; and (d) pointing at the desired information included in the pointing screen when it is determined that the desired information is included in the pointing screen or after step (c). At least one of steps (a), (c), and (d) is performed by a user's motion in at least one direction selected from up, down, forward, backward, to the left, and to the right.
